

Purposely designed for your health, wellbeing & comfort

Heat recovery ventilation
systems tailored for YOU

PAUL
Heat Recovery 

PAUL Heat Recovery - the ventilation specialists

Paul Heat Recovery is a well-established specialist in MVHR (Heat Recovery Ventilation) systems for domestic and commercial properties in the UK market. **We apply the Passive House specification**, which we see as best practice guidelines for all types of dwellings (whether Passive or not). Our first priority as a business is to ensure you receive the most appropriate MVHR system to **optimise air quality and humidity levels** in your property, **looking after your health and wellbeing**. We offer our customers **as much support as required** to make each project a success.

We care for your health and wellbeing like no other *

- * We are the only company that specifies to indoor air quality**
- * We believe that specification to Passive House is best practice for ANY dwelling**
- * We support our customers throughout the whole process and beyond**

OPTIMISED INDOOR AIR QUALITY WITH SILENT OPERATION

Well-engineered MVHR units, a good design and sufficient attenuators/silencers are key to an almost inaudible MVHR system. We aim to achieve less than 25 decibels in habitable rooms.

Unlike others, we look at optimising the ventilation for each individual room to ensure the best indoor air quality where it matters.

NO COMPROMISE DUCTING SOLUTIONS

As the ducting is embedded in the structure, it needs to last the lifetime of the building. Therefore it needs to be:

Efficient. Hygienic. Durable. Cleanable.

In our experience as consultants, we have identified that most of the ducting offered by the industry does not fulfil this criteria.

We have tried and tested a number of ducting solutions and have selected a portfolio of high quality components from different manufacturers.

VENTILATION FOR ALL APPLICATIONS

We offer ventilation systems for bespoke dwellings, larger developments (economy MVHR) and commercial applications.

- Whole house MVHR
- Cascade MVHR
- Single room heat recovery
- Room-by-room controlled MVHR
- Automated MVHR
- Humidity recovery
- MVHR/heat pump combinations (heating & cooling)
- Exhaust air heat pumps
- MEV and dMEV

Multi award winning ventilation company

OFFERING A RANGE OF SERVICES TO BENEFIT YOU

- Consultancy on domestic ventilation
- Professional design service
- Supply of all components for domestic MVHR
- Installer training
- Installation service
- Project support
- After sales care
- Maintenance services
- Online shop & discounted filters

“

The whole team at Paul Heat Recovery were absolutely phenomenal in providing us remote support over the phone, during every single step of the install. No matter how simple or complex the question, the whole project and technical team were only a phone call away, even happy to talk us through elements as we went through the install.

- Giuliano and Zara (Grand Designs builders)
